

NAMAN TYAGI

Brooklyn, NY | (929) 605-9520 | namantvagi2727@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Software Engineer | Backend & AI Applications | NYU M.S. Computer Science, May 2026

LANGUAGES & TECHNOLOGIES

Languages & Frameworks: Python, TypeScript, JavaScript, SQL, Django REST Framework, FastAPI, React, Next.js

AI & Machine Learning: PyTorch, Hugging Face Transformers, LangChain, FAISS, RAG, NLP, Fine-Tuning

Cloud & Data: AWS, Azure, PostgreSQL, Redis, Apache Spark, Kafka, Celery Beat

Testing & Tools: Docker, GitHub Actions CI/CD, pytest, Prometheus, Grafana, Power BI, Git

AI Coding Tools: Claude Code, Codex, Cursor, GitHub Copilot

EXPERIENCE

Software Engineer

January 2026 - August 2026

NYU Office of Faculty Affairs

New York, NY

- Built Django REST Framework APIs and PostgreSQL-backed workflows for a platform serving 500+ faculty; automated 3 administrative processes with Celery Beat scheduling and escalation logic.
- Built an Excel importer with zero data errors across 20 cases; wrote integration tests that caught 3 pre-release bugs.
- Reduced manual record lookup time by an estimated 60% through AI-driven document classification across AWS S3 and Azure Blob Storage; built a LangChain/FAISS FAQ chatbot for faculty affairs.

AI and Power BI Intern

June 2025 - August 2025

Mast-Jägermeister US, Inc.

White Plains, NY

- Deployed an offline LangChain/FAISS RAG chatbot for 50+ field staff to search 1,000+ enterprise documents; automated ingestion and semantic indexing to cut retrieval time by roughly 70%.

Artificial Intelligence Researcher

September 2023 - August 2024

University of Essex

Remote, UK | Part-time

- Fine-tuned transformer NLP pipelines on approximately 10,000 annotated samples and evaluated precision-recall tradeoffs; research published in Human Behavior and Emerging Technologies.

Global Technical Support Engineer

January 2024 - June 2024

Ciena

Gurugram, India

- Resolved 50+ monthly network escalations for 15+ global clients using packet captures, logs, and CLI diagnostics; automation scripts and technical documentation cut case resolution time by approximately 25%.

PROJECTS

Prism: LLM Gateway & Control Plane | [GitHub](#)

Python, FastAPI, PostgreSQL, Redis, Docker Compose, Prometheus, Grafana, Jaeger

- Built an LLM gateway with exact-match Redis caching, request-cost tracking, and automatic provider failover using a 3-state circuit breaker; added operational dashboards and OpenTelemetry tracing.
- Achieved 245-259 requests/sec in local Locust tests with mixed Ollama/mock-provider traffic; traced a 77% error rate near 300 requests/sec to per-request Redis connections and fixed it with a shared pool.

ConTicx: Full-Stack Ticketing & Payments | [GitHub](#)

Next.js, React, TypeScript, Upstash Redis, Hyperswitch, Vercel

- Built a ticketing application with 10-minute Redis inventory holds, server-side pricing, Hyperswitch sandbox checkout, refunds, and payment-status reconciliation.
- Implemented atomic Redis reservations and a concurrency test for 15 requests against 10 tickets, checking successful orders and inventory accounting.

Airspace Congestion Monitoring System | [GitHub](#)

Python, Kafka, Spark Structured Streaming, InfluxDB, MongoDB, HDFS, Streamlit

- Processed 475,000+ flight records with Kafka and Spark, computing congestion metrics in 30-second windows with a 10-second slide; built a Streamlit dashboard with live maps and historical analysis.

EDUCATION

NYU Tandon School of Engineering

August 2024 - May 2026

M.S. Computer Science

Coursework: Design and Analysis of Algorithms I, Machine Learning, Principles of Database Systems, Big Data, Cloud Computing

Amity University, Noida

July 2020 - June 2024

B.Tech. Computer Science & Engineering (Honors in AI & ML)

Coursework: Data Structures using C, Object Oriented Programming (C++), Deep Learning & Neural Networks, Database Management Systems

Publications: 1 journal article, 1 IEEE conference paper, and 2 book chapters. [Google Scholar](#)
